

# Project Case Study

**Client:** Kier Construction  
**Project:** Granville Road Offices  
**Location:** Granville Road, London  
**Services:** Measured Survey

Approached by our client, Kier Construction, and under competition Logic PM were instructed to provide accurate measured surveys of a 5,000 sq ft building in Lewisham which is part of the South London and Maudsley Hospital Trust.

As part of our works we had to provide a full survey of the internal and external layouts of the building, including all internal services and equipment. Using our in-house design team, Logic PM's engineers completed the survey over a three day period, working within the constraints of an operational building. This information was passed to our CAD Design team and the building layouts were created and issued to the client in less than 1 week from order.

Our internal survey included the accurate positioning of location and size of radiators, pipework, electrical socket outlets, data outlets, positions of electrical distribution boards and main distribution, light fittings, light switches, Fire alarm detection, break glass, emergency exit lighting, Intruder alarm detection and nurse calls

The external work required a level survey of the building and this information was also transposed onto a layout to assist the architect in the design development of the project.

With regard to our services the client said *"We required a very quick turnaround on the appointment and Logic PM delivered to our expectations."*

*"We required a very quick turnaround on the appointment and Logic PM delivered to our expectations."*
